Date	29 September 2026
Team ID	SWTID-2026-1374
Project Name	Script-Controlled ACL – Restrict Record Access Based on Field Value
Maximum Marks	2 Marks

Data Flow Diagram

Data Flow Diagram showing how data moves between the external entities, processes and data stores of the Script-Controlled ACL system.

DFD Symbol Legend

Symbol	Name	Used in this project
Oval / Rounded shape	External Entity	Administrator, Normal User (roles bb1–bb4)
Rectangle with numbered header	Process	1 Authentication, 2 Access Control, 3 Record Handling
Rectangle (solid fill, no number)	Data Store	User & Role Table, Institution Details Table
Labeled arrow	Data Flow	Login credentials, authorized request, permitted records, etc.

Diagram

Data Flow Diagram – Script-Controlled ACL (Restrict Record Access Based on Field Value)

Flow Description

- The Administrator and Normal Users log in; Process 1 validates them and reads their roles from the User & Role Table.
- Process 2 evaluates the ACLs. The READ ACL script checks the role and the Branch value (EEE) of each record.
- Authorized requests go to Process 3, which creates, reads, writes or deletes records in the Institution Details table.
- Administrators receive all records, normal users receive only permitted records, and unauthorized requests get an access denied message.
