

Problem-Solution Fit

Date	29 September 2026
Team ID	SWTID-2026-1374
Project Name	Script-Controlled ACL – Restrict Record Access Based on Field Value
Maximum Marks	5 Marks

Problem-Solution Fit Canvas:

The canvas below checks that the proposed solution addresses the root cause, behavior and limitations of the target users.

1. CUSTOMER SEGMENT(S) [CS] - Institution administrators - Faculty and staff who use student records (e.g., EEE department) - Users with roles bb1–bb4	6. CUSTOMER LIMITATIONS EG. BUDGET, DEVICES [CL] - Access depends on the roles assigned by the admin - Needs a browser and a ServiceNow login - Only the admin can manage roles and ACLs	5. AVAILABLE SOLUTIONS PROS & CONS [AS] - Default table access – simple, but every permitted user sees all records - Role-only ACLs – easy, but cannot filter by Branch value
2. PROBLEMS / PAINS + ITS FREQUENCY [PR] - Unauthorized users may view, edit or delete sensitive student records - Occurs whenever records are accessed	9. PROBLEM ROOT / CAUSE [RC] No role-based and field-based (Branch) access control on student records	7. BEHAVIOR + ITS INTENSITY [BE] - Users try to open records outside their branch - High intensity – happens in every session
3. TRIGGERS TO ACT [TR] - Need to protect confidential student data - New users, roles or branch records are added	10. YOUR SOLUTION [SL] - Custom Institution Details table (u_institution_details) - Roles bb1–bb4 assigned to users - READ, CREATE, WRITE and DELETE ACLs - READ ACL script checks Branch (EEE) and role - Administrators keep full access	8. CHANNELS OF BEHAVIOR [CH] ONLINE ServiceNow web UI – forms, list views, Users, Roles and ACL modules
4. EMOTIONS BEFORE / AFTER [EM] - Before: worried and unsure about data privacy - After: confident and in control of access		OFFLINE Requests for role or access to the administrator / department office
