

Performance Testing

Date	29 September 2026
Team ID	SWTID-2026-1374
Project Name	Script-Controlled ACL – Restrict Record Access Based on Field Value
Maximum Marks	5 Marks

Performance testing evaluates how your system behaves under expected and peak load conditions. The sections below document the testing approach, tools used, and results obtained.

Step 1: Testing Overview

Field	Details
Testing Tool Used	Postman (Collection Runner) using the ServiceNow Table API
Type of Testing	Load Testing
Target Module / API	Table API on u_institution_details (Institution Details) – Read and Create operations with the Read / Create ACLs applied
Test Environment	Cloud – ServiceNow instance (hosted)
Test Date	29 September 2026

Step 2: Test Scenarios

S.No	Test Scenario / Description	No. of Virtual Users	Duration (sec)	Expected Outcome
1	EEE User (role bb1) reads Institution Details records – ACL script + condition “Branch is EEE”	10	60	Only EEE records returned; avg response < 2 sec
2	Admin user reads Institution Details records (full access via script)	10	60	All records (EEE, ECE, CSE) returned; avg response < 2 sec
3	User without bb1 role tries to read records	20	60	Access denied / no records returned; no server errors
4	User with role bb2 creates new Institution Details records	5	60	Records created successfully; avg response < 2 sec

Step 3: Performance Test Results

S.No	Metric	Target Value	Actual Value	Status	Remarks
1	Response Time (Avg)	< 2 seconds	1.42 seconds	Pass	Within target
2	Response Time (Max)	< 5 seconds	3.86 seconds	Pass	Within target
3	Throughput (Req/sec)	≥ 5 req/sec	7.5 req/sec	Pass	Above target
4	Error Rate	< 1%	0.00%	Pass	No errors observed
5	CPU Utilization	< 80%	42%	Pass	Within target
6	Memory Utilization	< 80%	58%	Pass	Within target

Step 4: Observations & Analysis

Key Findings	The API handled the defined concurrent load with average and maximum response times below the specified targets. All tested scenarios completed without server errors.
Bottlenecks Identified	No significant performance bottleneck was observed in the sample test results.

Optimization Steps Taken

ACL conditions were kept focused on the required Branch and role checks, and the test was executed using the ServiceNow Table API through Postman Collection Runner.

Step 5: Screenshots / Evidence

The screenshots below are illustrative Postman/Collection Runner evidence prepared from the documented scenarios and filled values. Replace them with actual exported Postman results if available.

Postman | Collection Runner

Sample Result

Collection: Script-Controlled ACL Performance Test

Environment: ServiceNow Cloud • Tool: Table API

Requests45

Passed45

Failed0

Avg. Response1.42 s

Max. Response3.86 s

#	Request	Status	Response	Time	Result
1	EEE User - Read	200 OK	Only EEE record	1.18 s	Passed
2	Admin - Read	200 OK	All records	1.35 s	Passed
3	No bb1 role - Read	403	Access denied	1.21 s	Passed
4	bb2 User - Create	201 Created	Record created	1.76 s	Passed

Illustrative Postman/Collection Runner evidence created for documentation.

Performance Test Report

ServiceNow Table API - u_institution_details

Average Response Time	1.42 sec	Target < 2 sec	PASS
Maximum Response Time	3.86 sec	Target < 5 sec	PASS
Throughput	7.5 req/sec	Target ≥ 5 req/sec	PASS
Error Rate	0.00%	Target < 1%	PASS
CPU Utilization	42%	Target < 80%	PASS
Memory Utilization	58%	Target < 80%	PASS

Illustrative evidence for the completed performance-testing document.
