

Project Initialization and Planning Phase

Date	29 September 2026
Team ID	SWTID-2026-1374
Project Name	Script-Controlled ACL – Restrict Record Access Based on Field Value
Maximum Marks	3 Marks

Define Problem Statements (Customer Problem Statement Template):

A customer problem statement helps the team understand the customer's point of view and focus on what matters to create the right solution. Here it is written from the perspective of the users of the Institution Details table in ServiceNow.

Customer Problem Statements:

Problem Statement (PS)	I am (Customer)	I'm trying to	But	Because	Which makes me feel
PS-1	An institution administrator.	Protect student information and keep complete control over all records.	Any user with table access can open student records.	There is no role-based and field-based access control on the records.	Concerned about data security.
PS-2	An EEE department staff member.	View and manage only the EEE branch student records.	I can also see, or am blocked from, records that are not meant for me.	Access is not restricted by role and by the value of the Branch field.	Confused and uncertain about data privacy.
PS-3	An unauthorized user (no EEE role).	View, create, edit or delete student records.	The system should deny access to EEE records.	ACLs and READ script check my role and the Branch field value.	Restricted, as access is allowed only to authorized roles.
