

Empathy Map

Date	29 September 2026
Team ID	SWTID-2026-1374
Project Name	Script-Controlled ACL – Restrict Record Access Based on Field Value
Maximum Marks	4 Marks

Empathy Map

Empathy map to understand the customer/user from four perspectives – what they Say, Think, Do, and Feel – in relation to the problem the project addresses (unauthorized access to student records in an institution).

SAYS • “Student records must be visible only to authorized people.” • “EEE branch data should not be opened by users of other branches.” • “I need an easy way to control who can view, create, edit and delete records.”	THINKS • Sensitive student data could be misused if access is not restricted. • Role-based and field-based access rules will reduce manual monitoring. • Administrators should always keep complete access to all records.
ADMIN / STAFF USER (Institution Administrator & EEE Department Staff)	
DOES • Logs in to ServiceNow and opens the Institution Details table. • Assigns roles to users and configures ACLs for Read, Create, Write and Delete. • Checks that only EEE records are visible to authorized users.	FEELS • Worried about unauthorized access to confidential student information. • Frustrated when users see records outside their branch. • Confident and relieved when access is controlled by roles and the Branch field.
